

# **RECEIPT MANAGEMENT SYSTEM**

**Group 2  
BSIT 2-1**

# Introduction

**Receipts** are an important proof-of-purchase document for both customers and businesses. It confirms that a customer received the goods or services they paid for, or that a business was compensated for selling goods or services to customers.

**Receipt Management System** is a business system that manages transaction receipt data. It helps businesses capture, store and manage transactions digitally in a centralized database. It also provides a consolidated overview of all transactions and payment types in one portal.

# User Profiles
